- During the Pre-Crisis period (January to May 2025), QuickBite maintained a healthy average of ~16.9K orders per month. March was the strongest month at 17.53K orders.
- The Crisis period (June to September 2025) tells a starkly different story — monthly orders collapsed to an average of just 6.6K, with September recording the lowest at 6.51K. This represents a 68.93% overall order decline.
- Bengaluru, QuickBite's largest market at 28.2K Pre-Crisis orders, suffered the steepest absolute drop — losing over 19.5K orders during the crisis. All 8 cities followed the same pattern, confirming this was a platform-wide crisis.
- Category preferences remained consistent — Beverages (37.6K vs 11.1K) and Starters (36.2K vs 10.3K) led both periods. Sweet Lassi was the single most ordered item, declining from 16.35K to 4.92K during the crisis.

- QuickBite's financial performance reveals the true scale of the crisis. Pre-Crisis revenue stood at ₹37.62M across January to May 2025, with consistent monthly performance averaging ₹5.6M. March was the strongest month at ₹5.81M.
- The Crisis period (June–September 2025) brought a 70.92% revenue collapse, generating only ₹10.94M in total. June marked the turning point at ₹2.15M, with revenue remaining flat through September at ₹2.00M — showing no signs of recovery within the period.
- Geographically, Bengaluru accounted for the largest revenue contribution Pre-Crisis

- The customer crisis at QuickBite was severe and platform-wide. Pre-Crisis, QuickBite served 87K customers across all cities. During the Crisis period, 73K of those customers stopped ordering entirely — representing an 83.81% churn rate.
- The damage extended beyond casual users. QuickBite's top 5% customers — its highest-value segment — saw 80.98% churn, dropping from 3.65K active premium customers to just 694. This signals that even customers with strong prior engagement lost confidence in the platform.
- Most alarming is the loyal customer churn. Of 58 identified loyal customers, 49 churned — an 84.48% loss rate. These are customers who had demonstrated consistent ordering behaviour before the crisis. Their departure represents not just lost revenue but lost brand
